

# Ui Process Mining

## Evolve your processes, discover better outcomes

Use data from your systems and applications to understand and improve end-to-end business processes

## Benefits

**Gain** much needed transparency into mission critical business processes

**Transform** processes to delight customers, engage employees and drive operational efficiency

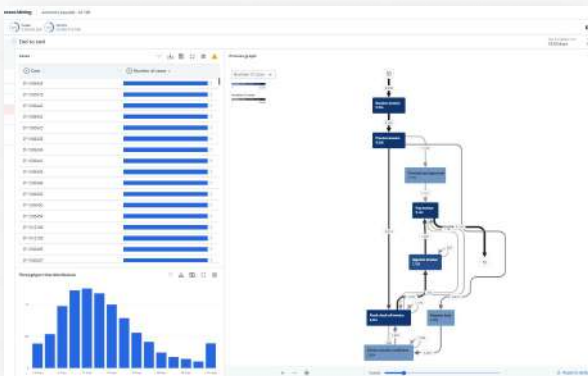

**Boost** success rate of automation and transformation

**Activate** your people, robots and systems to work together cohesively

## How does it work?

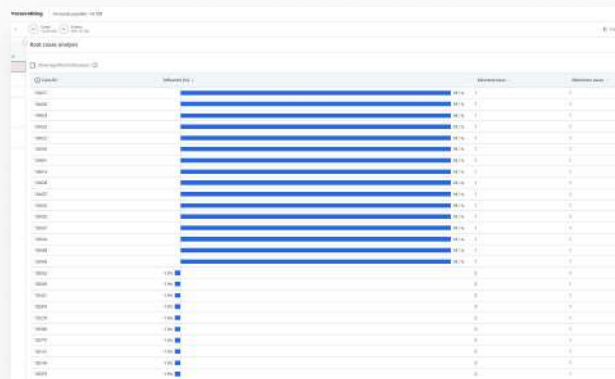

### Discover end-to-end business processes

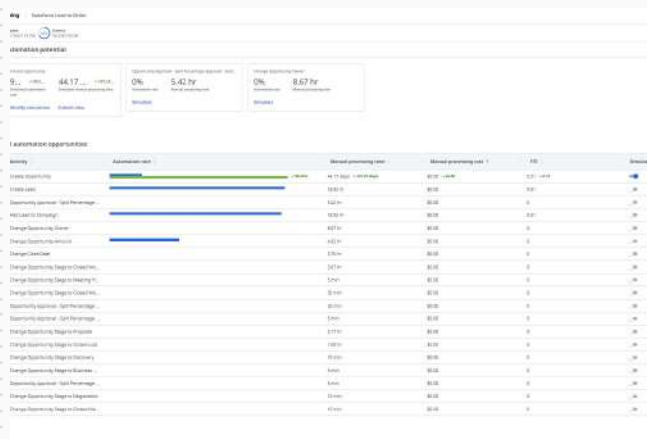

By leveraging existing data left behind in systems like SAP, Oracle and Salesforce, Process Mining provides you with full transparency into your business processes and how they are executed.

### Understand and analyze how to improve them

Quickly identify what's slowing the process down, such as bottlenecks, rework, and inefficiency, and understand how to automate and optimize them.

With the complete picture, you'll know what to automate, what to improve, and how to do it.

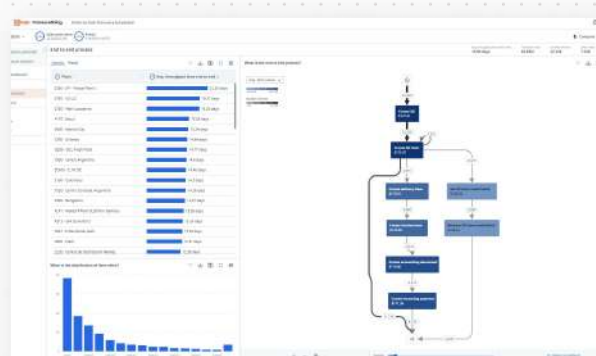

## Continuously monitor processes and proactively keep them on track

Monitor processes to ensure automation and improvements have positively impacted your key outcomes, and empower employees to make process-related decisions on the fly.

## Seamlessly turn insights into action

Directly send automation ideas discovered in Process Mining to [UiPath Automation Hub](#), where all accumulated knowledge from people, desktops and systems is integrated and prioritized based on the impact the automation has on the organization.

## Process Mining: Where strategy, automation and execution align

## Continuous Improvement Leads

Increase efficiency  
and reduce risk  
across the  
organization

## Automation Leads

Scale and accelerate  
automation across  
the processes and  
departments

## Process Owners

Understand, optimize  
and monitor end-to-  
end processes and  
your KPIs
